INDEX TO SCIENTIFIC NAMES IN TAXON

VOLUME 50, 2001

All appearances of scientic names are listed, including names used in figures (especially cladograms), in figure captions, and in tables. Abbreviations for taxonomic ranks conform to those used in the *Code* and in *Taxon*. Epithets that are [unranked] were intercalated where they bore a relationship to a ranked taxon; hence, "*Orthopolygala* [unranked]" is placed, out of alphabetical order, just after *Polygala*.

Infrageneric and infraspecific epithets are arranged in descending hierarchical order; that is to say, the abbreviated rank designators are not used as part of the alphabetization.
